GITHUB.COM/SILVIOALBERTOSCARFO91

Senior full-stack engineer. For seven years I've been building the digital customs of Switzerland on-site at BAZG — from the award-winning QuickZoll and Via apps to the officers' mobile app I now lead as architect.

Looking for a Lead Engineer or Architect role, growing towards leading a team.

Senior Full-Stack Engineer · Lead Developer & Architect

ti8m — on-site at the Federal Office for Customs and Border Security (BAZG), DaziT programme · FLIX team (formerly Mobile Team)

- **Lead developer and responsible architect of an internal mobile app for customs officers:** an Angular PWA used in the field to record cases and issue fines and receipts. I own its architecture and technical decisions and guide 3–4 developers from refinement to production.
- For that app, the link between business stakeholders and engineering: translate requirements into technical plans and weigh the risks and opportunities of every feature.
- **Senior full-stack engineer across the FLIX portfolio:** the public apps eVignette (formerly Via), QuickZoll, Activ and Periodic, and internal apps for customs staff, including a native iOS app that was among the first in Switzerland to turn the iPhone into a payment terminal.
- **Moved the team's applications from Cloud Foundry to AWS** as a team effort, onto cloud-native infrastructure (ECS, RDS, S3, CloudWatch).
- **Stand-in Scrum Master** for medium-length periods, keeping the team's ceremonies and flow going.
- Keep quality high through code reviews and hands-on development, and mentor junior engineers.
- **Built an AI timesheet automation for Abacus:** it reads the hours from customer PDF timesheets and books them into Abacus automatically, replacing manual data entry.
- Bring AI-assisted engineering into daily work: spec-driven tasks, agent guard rails and review practices with Claude Code.

Professional Software Engineer

ti8m — on-site at BAZG, DaziT programme · Mobile Team **BEST OF SWISS APPS 2019**

- Core member of the Mobile Team (now FLIX) in DaziT, which digitises customs and border processes for the Swiss Confederation.
- **Led development and release of the QuickZoll and Via (now eVignette) mobile apps**, winners of “Best of Swiss Apps 2019”.
- Built cross-platform apps in React Native and TypeScript, and backend services in Java Spring Boot with Apache Kafka, REST and PostgreSQL.
- Set up a layered testing strategy: unit (JUnit, Mockito), integration, consumer-driven contract tests (Pact) and system integration tests (testagent / testorchestrator services).
- Ran Jenkins CI/CD pipelines and integrated external federal systems via REST and Kafka.
- Contributed across QuickZoll, Via (now eVignette), Activ, Periodic and the team's internal apps.

JAN 2019 – MAY
2019
MILAN, IT

Software Engineer Trainee

Digital Garage Academy × ti8m

- Selected for outstanding performance in a competitive training programme, which led to a position at ti8m in Bern.
- Built Angular frontends in practical projects with Scrum teams.

2019
MILAN, IT

Head of Technology

Reason.solutions — blockchain start-up

- Led a team of 3 developers building a blockchain-based **Smart Social Contracts** platform.
- Designed and built the React.js frontend and Spring Boot backend.
- Defined product vision, requirements and roadmap with product managers and stakeholders.
- Published “What Are Smart Social Contracts? The New Business Model for the Blockchain”.

Selected work

Customs field PWA

LEAD DEV & ARCHITECT BAZG / DAZIT · 2024–

Lead developer and responsible architect of the Angular PWA: I defined the architecture, steer feature trade-offs with stakeholders and guide 3–4 developers, while still coding and reviewing.

Cloud Foundry → AWS

CLOUD MIGRATION BAZG / DAZIT · 2024

Migrated the team's applications from Cloud Foundry to AWS as a team: eVignette, QuickZoll, Activ, Periodic and the internal apps for customs staff.

QuickZoll & Via

MOBILE · AWARD BAZG / DAZIT · 2019–24

Led development and release of the QuickZoll and Via apps (React Native, TypeScript) on Spring Boot, Kafka and PostgreSQL services. Via lives on today as eVignette.

The FLIX portfolio

SENIOR FULL-STACK BAZG / DAZIT · 2019–

Senior full-stack engineer across eVignette, QuickZoll, Activ and Periodic, and the internal desktop and mobile apps for customs officers.

ti8m AI · Agentic delivery

AI-NATIVE ENGINEERING TI8M · 2026

Ran spec-driven delivery with Claude Code: requirements → task plans → agent goals with hard rules and a verifiable definition of done. The result is a restaurant platform with a Spring Boot 4 / Java 25 API and two Angular 22 apps (guests and staff).

Abacus timesheet AI

AI AUTOMATION TEAM · INTERNAL

Built a pipeline that reads the customer PDFs, uses AI to extract the hours into structured entries, and uploads them to Abacus automatically.

Smart Social Contracts

BLOCKCHAIN PRODUCT REASON.SOLUTIONS · 2017–19

As Head of Technology I led 3 developers, built the React.js frontend and Spring Boot backend, and shaped the product roadmap.
